

Basic Bow

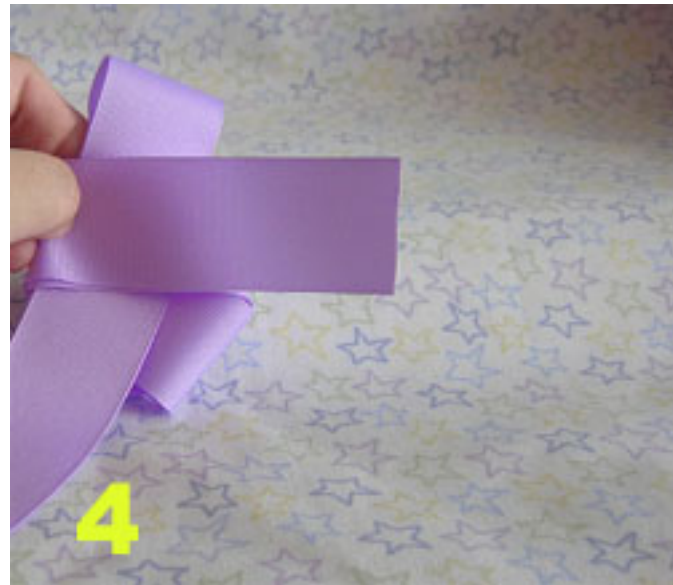

Cut your ribbon to your desired length, the ribbon should be in two equal length loops.

Cross the right ribbon loop over the left loop now the loops by pushing right loop beneath left, then pull under and through the

hole!

Pull the knot tight and adjust loops and the tails until they are the same size. Use scissors to notch the ends of the ribbon. You can also make a Basic Bow with no tails by just cutting them off.

Also another variation of this bow is for you to cut a piece of ribbon about 4 inches long and tie it into a loose knot in the middle to make like a cute rosette! Then just put it over the center of your bow turn it around and tie a knot. Wired ribbon works so great with this bow also!
